

**FOR IMMEDIATE RELEASE**

**CAPE Certified as SSPC QP1 Contractor**

ATLANTA, GA – September 21, 2010 – CAPE, Inc. received QP1 certification by the Society for Protective Coatings (SPCC). SPCC granted the certification after a detailed audit of CAPE’s quality control, safety, and environmental compliance programs and procedures related to surface preparation and industrial coating application on steel structures, which CAPE provides as part of its turnkey fuel systems inspection, construction, and repair services.

The U.S. Navy currently requires SSPC QP1 certification for their fuel system coating projects and other Department of Defense agencies are expected to also institute the requirement. Many industrial clients also prefer the certification to support their International Organization for Standardization (ISO) quality programs, since QP1-certified contractors must follow many of the requirements in ISO 9001-2000. Troy Blackmon, CAPE’s Vice President of Fuel Systems said “The level of performance required by CAPE to both achieve and maintain this certification will provide outstanding quality results that our clients have come to expect on every project.”

From headquarters in Atlanta, Georgia, CAPE delivers construction, environmental remediation, and fuel systems solutions to governmental agencies and private corporations around the globe. CAPE’s enviable growth record is built upon a history of performance excellence delivered by top-caliber personnel. Guided by our dedication to our mission, vision, and values while adhering to stringent management control systems, our employees are empowered to quickly respond to customer challenges. Our clients value CAPE’s rapid yet disciplined response to client issues and the accountability demonstrated by every member of our team.
